

Ideation Phase

Empathize & Discover

Date	20 February 2026
Team ID	LTVIP2026TMIDS88068
Project Name	Online Payments Fraud Detection using Machine learning
Maximum Marks	4 Marks

Empathy Map Canvas

An empathy map is a simple visual tool used to understand the behavior, needs, thoughts, and feelings of users involved in online payment systems. It helps the development team gain deeper insights into users' experiences and security concerns during digital transactions.

The empathy map allows the team to analyze the user's perspective, including their goals, challenges, and expectations while performing online payments. Understanding user problems such as fear of fraud, financial loss, and the need for secure transactions helps in designing an effective fraud detection solution. By creating the empathy map, the project focuses on developing a machine learning-based system that ensures secure, reliable, and real-time fraud detection for online payment users.

Example: Online Payments Fraud Detection
