

Project Design Phase Solution Architecture

Date	20 February 2026
Team ID	LTVIP2026TMIDS88068
Project Name	Online Payments Fraud Detection using Machine learning
Maximum Marks	4 Marks

Solution Architecture:

Solution architecture describes how different components of the system work together to solve the problem of online payment fraud. It bridges the gap between business requirements and technical implementation by defining system structure, workflow, and interaction between modules.

The proposed system uses a machine learning–based architecture that processes transaction data, analyzes patterns, and predicts fraudulent activities in real time.
