

Project Design Phase-II

Data Flow Diagram & User Stories

Date	20 February 2026
Team ID	LTVIP2026TMIDS88068
Project Name	Online Payments Fraud Detection using Machine learning
Maximum Marks	4 Marks

Data Flow Diagrams (DFD)

A Data Flow Diagram (DFD) is a graphical representation used to illustrate the flow of information within a system. It clearly describes how data enters the system, how it is processed, where it is stored, and how it exits the system. A well-designed DFD provides a clear understanding of system requirements by visually representing data movement, processing steps, and interactions between different components of the system. It helps in analyzing, designing, and communicating the structure and functionality of the system effectively.

User Stories

Use the below template to list all the user stories for the product.

User ID	User Story	Priority
US-01	As a customer , I want my online transactions to be checked automatically so that my money remains secure.	High
US-02	As a user , I want to receive alerts when a suspicious transaction occurs so that I can take immediate action.	High
US-03	As a bank administrator , I want the system to identify fraudulent transactions accurately so that financial losses can be reduced.	High
US-04	As a customer , I want fast transaction verification so that payment processing is not delayed.	Medium
US-05	As a system admin , I want transaction data to be stored securely for monitoring and analysis.	Medium
